- Creates revenue opportunities with value added products and services
- Process contactless transactions in less than a second to bust queues
- Enhanced industry security standards to protect you and your business
- Large colour screen makes it easy to read transactions and menus

Overview

The Cardsave Countertop iCT250 Colour Contactless credit and debit card processing machine is one of the most advanced new generation countertop card processing machines on the market, providing a combination of power, security, technology and cost effective operation.

New products and services. The iCT250 can host numerous applications creating revenue opportunities for you and effectively giving your customers access to new services. Launch your own Loyalty Card to motivate your customers to spend more, attract new customers by offering Gift Cards with the card value directly banked or offer customers cash-back at point of sale.

Latest Security Standards. Protect your business and your customer's data. The iCT250 is the first countertop terminal PCI PED 2.0 approved and enhancement ready which is now a compulsory requirement. Providing security-as-standard and peace of mind for both you and your customers in the fight to prevent card fraud.

Large colour screen. Making it easier to read transaction-related messages and access richer menus and messages.
