- Ensures every operation is simple to operate and easy to transact
- Complete portability for a clear line distance of up to 200m (660ft)
- Fast service provided via Bluetooth WLAN features

Overview

The Cardsave Portable credit and debit card processing machine is the ultimate wireless “pay-at-table” payment in a location solution. Our portable option enables you to take payment from your customers within your premises without them having to come to the counter.

For “customer not present” card transactions, this portable credit card machine also provides a great option for taking all your telephone and mail order payments from your customers.

Ideal for all retail shops, applications like restaurants and transactions where customers are not on the premises – our portable card machine makes payment much more convenient for you and your customers.

This fully Chip & PIN compliant and PCI PED certified credit card processing machine provides complete flexibility for the user combined with high security Bluetooth technology, allowing fast online authorisation of all credit and debit card transactions.

Features and Benefits

- Easy to use, fast and reliable to operate
- Uses a Bluetooth radio link to make mobile transactions possible
- Based on Telium dual processor technology for fast transactions
- 32-bit ARM processing and state-of-the-art security
- PCI PED certified and Common Criteria approved
- Ultimate convenience – take the terminal handset to your customer
- Terminal has a clear line of sight range of up to 200 metres (660 ft)
- Fast printing for quicker transactions – 18 lines per second
- Long life battery for up to 280 transactions or 340 hours standby
- Easy self-installation – just plug in and follow simple instructions
- Up to 3 terminals can be operated from a single base unit
- Supports the latest Chip & PIN card technology
- Large clear backlit keypad
- High contrast backlit display for ease of viewing in all lighting conditions
- Quiet and fast thermal printer with easy-loading mechanism
- Integrated smart and magnetic card readers
- Accepts all major credit, debit and charge cards
- Ultra fast and cost-effective transactions
- Large colour screen display enables enhanced merchant messaging capabilities
- Can be integrated into a local Ethernet network or communicate over a private or public IP network
- Combines the flexibility of a Bluetooth radio link with the performance of IP technology
- Designed to be used by both the merchant for transaction processing and customer for PIN entry

Cardsave credit card machines are equipped with Address Verification Services (AVS) and Cardholder Security Code (CSC) technologies in the fight to combat fraud with customer not present transactions.
